

Form GM (General Management)

- Identifies the source, characteristics, and quantity of hazardous waste generated on site;
- Records the quantity of hazardous waste managed on site and the on-site management methods;
- Quantifies the hazardous waste shipped off-site and the off-site management methods.

9

Disclaimer

Information shown on screens for this tutorial was taken from test data developed for the hazardous waste reporting program. Device, process, and other information from existing facilities were used for illustrative purposes only. Existing facility data was used to show typical usage of screens in the program. None of the information presented in the following screens should be viewed as accurate information.

Hazardous Waste Form GM

Hazardous Waste Form GM, General Management, is divided into three sections that together document: the source, characteristics, and quantity of hazardous waste generated on site; the quantity of hazardous waste managed on site and the on-site management methods; the quantity of hazardous waste shipped off site and the off-site management methods.

If the Form GM is complete, each type of hazardous waste generated on site must be reported including those generated from production processes, from the treatment of non-hazardous waste, and hazardous waste residuals generated from the management of a hazardous waste.
